Public Private Partnerships

An investigation of the allocation of risks during the bidding processes for public and private sector partnerships.
Researchers S E Chen and Marcus Jeffries, University of Newcastle

The specific aims of this research are to investigate current approaches to the identification and allocation of risks during the bidding process of Public-Private Partnerships (PPP) with particular reference to the legal and financial (i.e. transaction) aspects. The ultimate objective of this research is to improve the process of risk identification and risk allocation for all Public and Private Sector stakeholders in PPP bidding. In doing so, the objective of minimising the transaction costs incurred during the bidding process will be achieved.
